

Linux and Networking

(Datacom/Communications Network Software Developer)

by: Kiran Kankipati, Updated: 14-July-2019

Course Overview

This course is intended for anyone (intermediate/beginner/student/working-professional) to gain good hands-on knowledge on a Linux Systems Software development platform which includes both user-space and kernel-space along with core Network Software Development. So that you comfortably work on domains such as:

- Datacom domain - core routing and switching (R&S)
- Network Protocols
- Networking Stack
- CGE Appliances (Career Grade Equipment)
- Network Appliances

Duration

30 - Sessions (2 hours a session) - Lectures and Practical

Approximate duration: 3 months

Prerequisites

- You should have good prior C programming skills (intermediate/expert level) and hands-on such as:
 - Algorithms and programming
 - Structured programming
 - Knowledge/hands-on Data-structures, APIs, etc.

Topics Covered

Linux User-Space:

- Linux C programming advanced topics
- GCC compiler
- multi-threaded user-space apps
- Linux Daemons

- Process/Thread architecture and scalability
- Process/Thread synchronization
- Socket programming and Network software programming
- Research

Kernel-Space:

- Linux Kernel basics and internals
- Kernel architecture
- Kernel subsystems:
 - Platform, Networking, Memory management, Process, File-systems, etc.
- Kernel modules
- Kernel data-structures
- Kernel customization, compilation
- Kernel<>User-space interaction
- Kernel /proc file system
- Kernel programming
- Kernel ioctl() interface
- Research

Networking:

- Networking Fundamentals
- IPv4 Addressing, Linux Kernel IPv4 Network stack
- Protocol architecture
- L2 bridging(switching), L3 routing fundamentals, deeper concepts and research
- MPLS/VPLS L2 tunnels
- VPN L3 tunnels
- Routing protocols
- Networking Appliances architecture: Router, Firewall, etc
- CCNA course topics:
 - such as IPv4 subnetting, VLAN, NAT, broadcast/collision domains, etc.
- Building a small home networking lab
- Architecture of Carrier Grade Network Equipment (or appliance)
- Research

Course Delivery

Students living abroad:

We can have teaching sessions via Google hangouts/Skype, etc (audio/video/chat sessions).

You can pay your fee via Paypal and enroll for the classes/course.

Course Fee: \$300 USD

Students living in India:

We can have teaching sessions via Google hangouts/Skype, etc (audio/video/chat sessions).

You can pay your fee directly to my bank account and enroll for the classes/course.

Course Fee: Rs. 15,000/- INR

Students staying at Bangalore:

You can come home for the teaching sessions, optionally I can also engage via Google hangouts/Skype, etc (audio/video/chat sessions). You can pay your fee directly or to my bank account and enroll for the classes/course.

Course Fee: Rs. 15,000/- INR
